REASONS TO CHOOSE OPAL-RAD PACS

1) Fastest Viewer on the Market – launches in seconds

a. Even from home!

b. Entire palate of digital annotations included standard

2) Able to View ANYTHING that speaks DICOM. If the modality talks DICOM we can view it

a. Receiving studies from other PACS systems is also not a problem

3) Opal-Mammography

a. Now you can view all modalities on one reading station, saving time and money

b. Complete set of advanced hanging protocols to efficiently phase through the desired Protocol.

c. Toggle cad with a hotkey, works great with our keypad

4) TAT – Turn Around Time feature

a. Great for teleradiology

b. Allows contractual report turnaround times to be met consistently
c. Studies automatically are tracked and prioritized right on the radiologists worklist as time grows nearer to contracted TAT
d. TAT is configured per location

5) Opal-CLOUD allows images to be viewed on any device; iPad, iPhone, Droid, Kindle etc

a. Great for referring physician review

6) Ability to BURN CD's on-the-fly, anywhere, anytime, multiple patients, and create teaching

a. Facilities sending you studies can burn from their own PC's

7) Ability to import CD's from outside facilities

a. Allows physicians to view CD study within the Opal-RAD viewer

b. No more headaches from the CD viewers

8) Pre- fetch and routing of exams to workstations is now *obsolete*

a. Viztek's "ONCALL" feature allows doctors to automatically pre-fetch studies enabling them to load the studies from their location

b. Studies load rapidly to enable remote users to read as if they were directly on the server

9) 3D Spine Labeling – relieves the user from the constant juggling to a "scout" image for reference to the anatomical region when using traditional cut-lines, L1-L2 region… etc

a. Also try our Context tool to set all opposing views to the same point of reference

10) MPR and MIP on-the-fly Rapid generation of corresponding views based on the selected angle. (Allows doctors to use an Axial shot to generate a Coronal + Sagital View)

11) Each user has his/her OWN username which allows for:

a. Fully customizable layout of worklist (every user has their own sort preference)
b. Viewer mouse settings adjusted PER user PER modality (left mouse is magnify for Dr. X, and Dr. Z likes the left mouse button to be Zoom)
c. Roaming Hanging Protocols follow the user, NOT the machine/computer
d. Filters apply to each user, allowing them to setup a display that is "specific" to each user

12) Fully integrated DICTATION/TRANSCRIPTION

a. No more dictating into the wrong patients file because different 3rd party software is handling the dictation.

b. Speeds up dictation time and eliminates the need to dictate patient demographics (Dictations are automatically attached/paired with the correct patient)

c. Dragon Medical SDK integration upgrade - allows users to emulate the best in Voice Recognition programs

13) Ability to further enhance the customer relations by

a. Producing a professional, site-specific "Report" containing the patient demographics, the doctors impression, along with key images

b. Send the patient to their doctor with a USABLE viewer on their prior exam CDs

14) Viztek also offers a complete RIS solution – completely owned and developed by Viztek

15) Access to prior exams with no delay in de-archiving. A prior from 1 year or 6 years ago will be available in seconds, not minutes.
